

Do you aspire to work for an international, innovative organization and contribute to a healthier environment whilst working there? And are you looking for a workplace which encourages entrepreneurship and personal development? N+P Group is currently seeking several Maintenance Technicians for the Teesside (Port Clarence) alternative fuels production facility.

“We challenge you to step into our world.”

Maintenance Technician

Main tasks and responsibilities of the Maintenance Technician

Our ideal Maintenance Technician is a multi-skilled technician, willing to work in a challenging 365 – 24/7 waste manufacturing operation. It is his or her goal to drive the efficiency, development and progress of our manufacturing and processing facilities and to minimise operational downtime

The technician continuously improves production facilities, reduces costly breakdowns and assists in developing strategies to improve overall reliability and safety of plant, personnel and production processes.

General duties

- Ensure the health and safety of yourself, other employees and any visitors
- Ensuring compliance with health and safety legislation.
- Hands on maintenance / Break down cover.
- Carry out reactive maintenance as and when required.
- Maintain effective communications.
- Carry out tasks set.
- Adhere to Safe Working Procedures & Risk Assessments for all Maintenance Procedures.
- Control of contractors
- Investigating & reporting root cause of damage/defects to plant machinery.
- Carry out maintenance programmes including PPM, TPM and defect reporting system.
- Ensuring PPM's are carried out as per schedule.
- Optimise inventory and proactively manage stock.
- Carry out predetermined checks and audits to ensure compliance/safety.
- To take part in any training activities including instructing other personnel where necessary.
- Work as part of a team.

Requirements of the Maintenance Technician

To achieve the expectations of this job, it is necessary that the Maintenance Technician has good communication skills. He or she must have the ability to work in a team and has to have the energy and motivation to work hard.

Requirements

- Mechanical & Electrical Maintenance qualification required.
- Computer literate with good communication skills.
- Able to understand and follow safe working procedures and champion safe working practices.
- Excellent communication and IT skills.
- Ability to work to deadlines safely and effectively.
- Hands on engineering decision making.
- Dynamic in approach and motivated to succeed.
- Willing to work in a 5 shift pattern

Remuneration

Despite our growth we remain a welcoming company with well-motivated and enthusiastic employees. The successful applicant will be employed as a full time, permanent employee. The financial package will be competitive. We support personal growth and development. We offer (on the job) training and a meaningful career within the company.

Company Profile

As an Internationally recognized company, the N+P Group has 25 years of experience in contributing to a better, greener environment. We do this by being progressive, innovative and a market leader in the alternative fuels and waste management sector.

N+P source and supply residual waste to the domestic and international Energy-from-Waste sector. We develop, co-ordinate and implement total concepts for recycling and treatment of industrial residues. We convert waste that can no longer be recycled and manufacture this waste into alternative fuels and secondary raw materials, which can replace polluting fossil fuels and primary raw materials. Our products are used at various large industrial installations such as cement kilns, power stations or blast furnaces. Use of these products will lead to a significant level of CO₂-reduction. It is our goal to make the use of fossil fuels redundant.

Alternative fuels production and supply are not the only things we do. N+P provide a consultative approach to develop our customers in recycling and recovery of their waste. We also manage and monitor quality, co-ordinate logistics, manage storage capacities and administrate permits.

Our organization is growing at pace, is dynamic, with many large multinationals as our customers. Our head office is in Nieuw Bergen, the Netherlands.
